

XIMA

XIMA VRTX

The Next Revolution in Call Recording Solutions

Don't let anything come between you and accurate call recordings. Capture them at the source with Xima Software's VRTX (Voice Recording Technology) solution. Simply connect the in-line hardware between your T1, E1, or SIP physical circuit and your phone system, then plug it in to your Chronicall server. The VRTX hardware will record everything that passes through and report it to Chronicall, where the Recording Library module will pick up those recordings and make them available to listen to from the Cradle to Grave interface.

Like Chronicall, Xima VRTX hardware is highly modular. Each type of VRTX hardware can be used in any combination. A Recording Library license is prerequisite for all hardware, and each appliance is covered under Xima Care. A 7' Cat 5 patch cable and a 6' USB cable are also included with each VRTX appliance.

VRTX-T1 / VRTX-E1 / VRTX-SIP Specifications

The VRTX-T1, VRTX-E1, and VRTX-SIP lines of hardware come in a small black plastic case about the size of a smartphone. Each piece is powered with a USB cable, which also transmits recording data to the Chronical server. The only difference between these models is which type of phone line they support.

- Length: 4 in.
- Width: 2 in.
- Height: 1 in.
- Weight: 1.5 oz.
- Number of physical trunks recorded with one VRTX: 1
- Powered over USB

The VRTX Advantage

Xima VRTX solutions and the recordings created with them are PCI compliant, CE certified, and court admissible. The hardware is also eligible for coverage by our world-class support package, Xima Care, so you can rest assured knowing that Xima has all of your technical support and troubleshooting covered. All of these factors combined with low cost and easy installation make it simple to choose VRTX as your call recording solution.
